

Learning Narrative - Esraa Abdelmoein

When I first considered switching careers from law to IT, I wasn't entirely sure if I would succeed. I decided to test myself by enrolling in the IT Analyst Program at NPower Canada. This program helped me gain essential technical knowledge and gave me the confidence to pursue a more in-depth learning experience. It also made the transition into my current studies at Nova Scotia Community College smoother, as I had already developed a foundational understanding of IT concepts.

Since joining the IT Programming diploma program at NSCC, I've learned various programming languages including Java, C, HTML, CSS, and JavaScript. I've also gained practical experience using professional tools like IntelliJ IDEA, Visual Studio Code, GitHub, and VMware. Working on real-world projects and developing websites has allowed me to improve my problem-solving, time management, and communication skills.

This journey has been transformative. It helped me uncover strengths I didn't know I had - persistence, adaptability, and a real passion for building and fixing digital systems. I now feel confident in my ability to work in the IT field, especially in web development and software support. I'm excited to continue growing professionally and personally in this dynamic and rewarding industry.
